

Features & Benefits

- Humane possum trap
- One movement set arm
- Lightweight design, portable and durable
- Fully rotatable bait block, which allows for ease of application
- Tested and approved by NAWAC Standards NZ

Manufactured by:

MOUNTING

Mount trap to designated tree or post, about one metre from the ground. Remove lid and use nails provided where holes are apparent at the top of the trap. At the base of the trap, use screw in the hole provided. Trap is now firmly positioned!

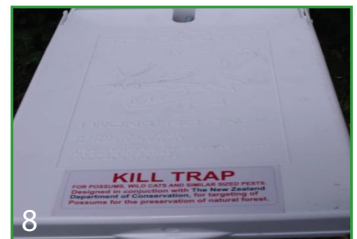

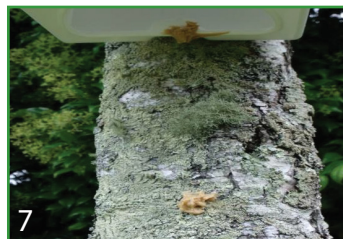

BAITING

Lift up metal bait bar and rotate plastic bait block upwards. Apply suitable bait paste. Return plastic baiter facing downwards. For a greater effect, add bait to tree and bottom of trap. Refit trap lid.

WARNING: Do not apply bait while trap is set.

SETTING

Using side lever, push forward to set the trap. Trapinator is now ready to catch possums. Once a possum is caught, the lever will fire forward.

RELEASE & RE-SETTING

To release the dead possum, push the red lever towards the setting position. Un-set the trap by pulling lever forward and apply more bait if needed. Do not attempt to apply bait while trap is set. Reset the trap by pushing the red lever down and back into setting position.

WARNING: This product is spring activated, use with caution.
